## Part 1. Half-wave rectifier

1. Assemble the circuit in Fig. 1

Fig. 1
2. Measure $\mathrm{V}_{\mathrm{SEC}}$ with the voltmeter in A.C.: $\mathrm{V}_{\mathrm{SEC}}=$ $\qquad$
3. Calculate $\mathrm{V}_{\mathrm{P}}$ : $\quad \mathrm{V}_{\mathrm{P}}=$ $\qquad$
4. Calculate $\mathrm{V}_{\mathrm{L}}$ : $\quad \mathrm{V}_{\mathrm{L}}=$ $\qquad$
5. Calculate $\mathrm{V}_{\mathrm{DC}}$ : $\mathrm{V}_{\mathrm{DC}}=$ $\qquad$
6. Measure $\mathrm{V}_{\mathrm{OUT}}$ with the voltmeter in D.C.: $\mathrm{V}_{\mathrm{DC}}=$ $\qquad$
7. How do the calculated and measured values of $\mathrm{V}_{\mathrm{DC}}$ compare?
8. Connect channel 1 of the oscilloscope to $\mathrm{V}_{\text {out }}$. Sketch the output in Fig. 2 and indicate $\mathrm{V}_{\mathrm{p}}$ and the period of the waveform.

Fig. 2

## Part 2 Full Wave Rectifier

1. Assemble the circuit in Fig. 3
2. Measure $\mathrm{V}_{\mathrm{SEC}}$ with the voltmeter in A.C.:

Fig. 3

$$
V_{S E C}=
$$

$\qquad$
3. Calculate $\mathrm{V}_{\mathrm{CT}}$ : $\mathrm{V}_{\mathrm{CT}}=$ $\qquad$ Measure $\mathrm{V}_{\mathrm{CT}}: \quad \mathrm{V}_{\mathrm{CT}}=\quad$ Do these voltages match?
4. Calculate $\mathrm{V}_{\mathrm{P}}$ : $\quad \mathrm{V}_{\mathrm{P}}=$ $\qquad$
5. Calculate $\mathrm{V}_{\mathrm{L}}$ : $\quad \mathrm{V}_{\mathrm{L}}=$ $\qquad$
6. Calculate $\mathrm{V}_{\mathrm{DC}}$ : $\mathrm{V}_{\mathrm{DC}}=$ $\qquad$
7. Measure $\mathrm{V}_{\mathrm{OUT}}$ with the voltmeter in D.C.:

$$
V_{D C}=
$$

$\qquad$
8. Connect to oscilloscope to $\mathrm{V}_{\text {out }}$. Sketch the output in Fig. 4 and indicate $V_{P}$ and the period of the waveform.

Fig. 4
9. What are the differences between the half-wave and fullwave rectifier circuits?
